INSPIRATION

The inspiration for upgrading JustMoney Swap stemmed from the ongoing demand in Web3 for increased decentralization. Previously, any project wishing to add its token to our swap needed to contact us. After conducting due diligence, our team would determine whether to open a liquidity pool and include the token in the dropdown menu. Moreover, only listed projects were able to add their own token to swap widgets, thus enabling their users to trade the token on their own platforms using JustMoney technology.

WHAT IT DOES

JustMoney Swap now supports the import of any token for liquidity addition in our pools, thus making it possible to self-list a token.

After importing the token and adding liquidity, projects can drive users to the swap in three ways:

1. Creating a direct link for their community that automatically imports the custom token for users.
2. Asking users to paste the token address into the JustMoney Swap token search field.
3. Using our widget builder to create a swap widget, which enhances accessibility and user experience by allowing users to integrate a customized swap widget directly onto their webpages.

Moreover, we've included a discounted swap fee structure that applies even to imported tokens, ensuring a cost-effective trading experience for all.

Learn more about discounted swap here [Discounted swap fees on TRON \(5-19trx\) | JustMoney](#)

WIDGET BUILDER

Our Widget Builder is designed to streamline the creation of various widgets supported by JustMoney. Users, including project teams, can effortlessly design widgets tailored to their specific needs—whether it's for single-chain, multi-chain, or cross-chain swaps. Additionally, options to create a bridge widget or a donation button are available.

Furthermore, we offer a hybrid widget that combines functionalities: a single-chain widget on one tab and a cross-chain widget on another. This versatile tool provides a comprehensive solution for diverse requirements.

Widget builder is already live and working and can be tested on <https://widget-builder.just.money/>

GENERATE PREVIEW

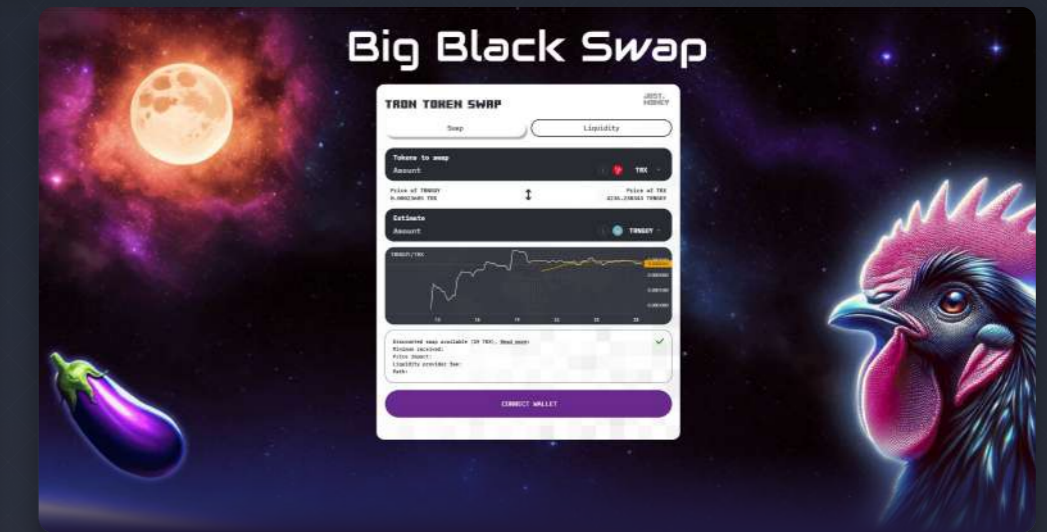

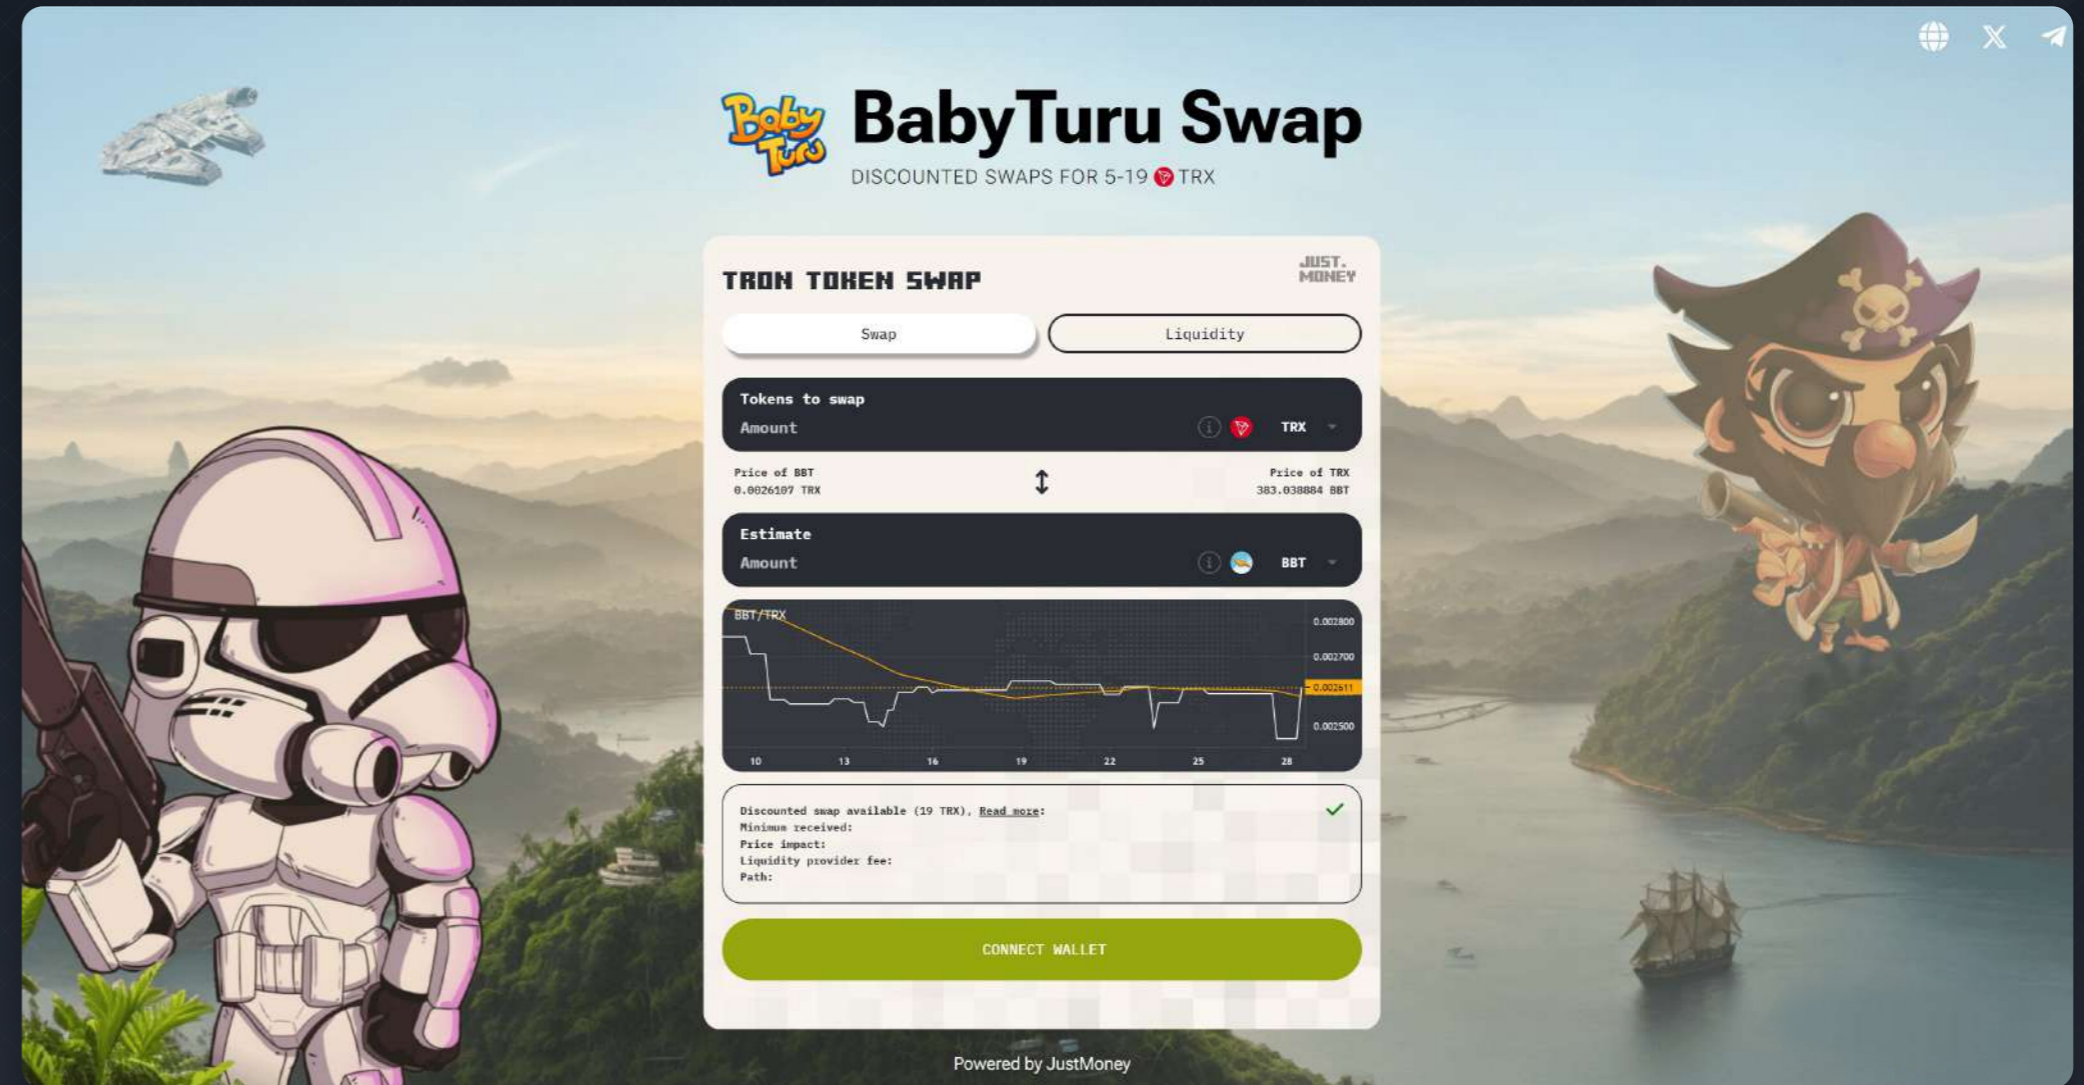

WHITE LABEL SOLUTION

To further benefit our partners, we have implemented a revenue-sharing model. This feature enables individuals and entities that deploy our widget to earn a share of the generated revenue.

We are proud to report that three white-label solutions incorporating our widget with the revenue share model are already operational and delivering value to users.

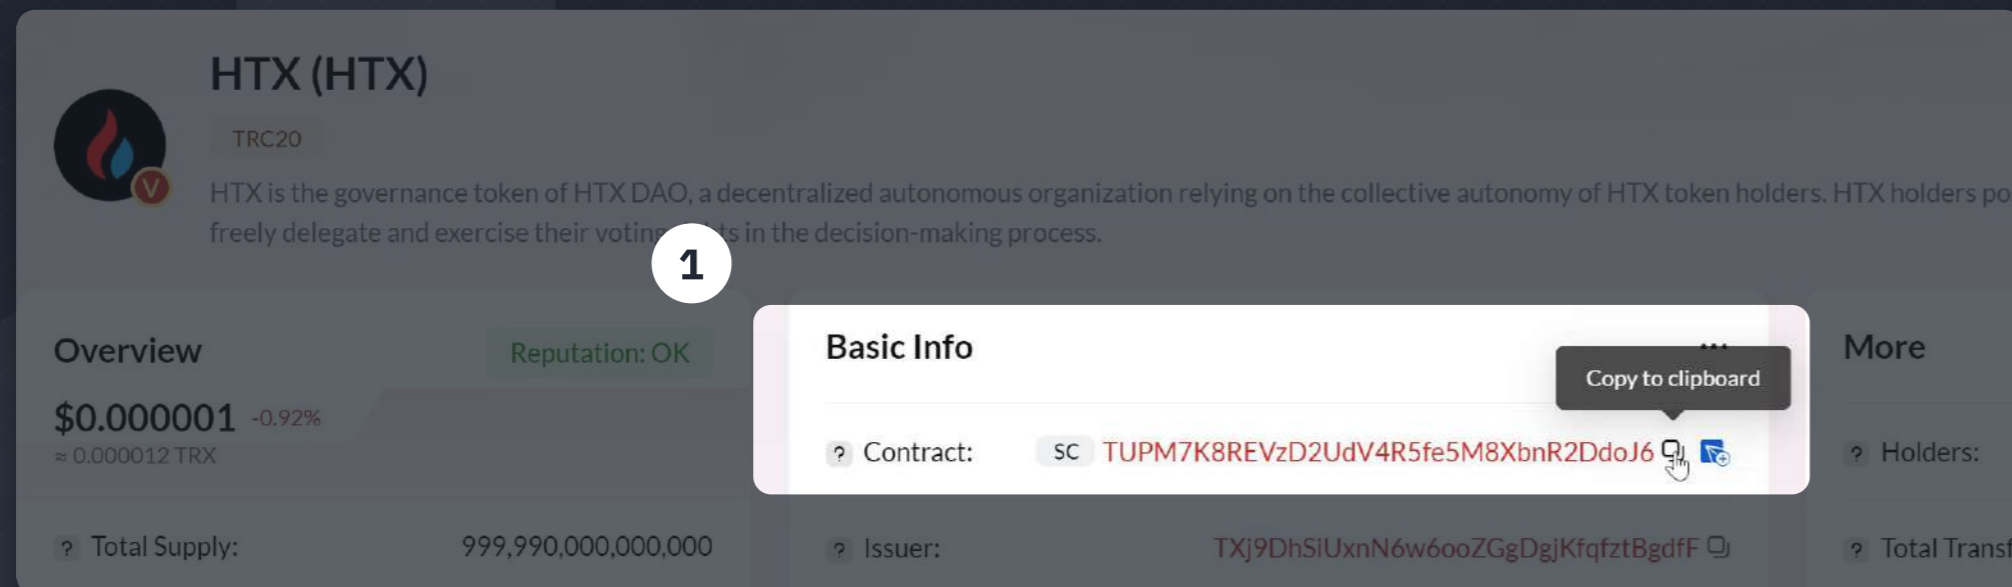

<https://www.babyturuswap.me>,
<https://www.booswap.trade> and
<https://www.memechicks.com/bigblackswap>

Our white-label swaps feature the integration of our widget on their platforms, with a distinct advantage: they include a designated wallet address for revenue sharing. Participants in this program will earn 10% from all discounted swaps, a cost borne by us as part of our commitment to energy efficiency. Following each transaction, 10% of the swap value is automatically transferred to the specified wallet address.

IMPORTING CUSTOM TOKENS MANUALLY ON THE WIDGET BUILDER

Users can paste the token address to the widget builder to include non-listed tokens on the widget.

AUTO-IMPORT CUSTOM TOKEN WITH A LINK ON JUSTMONEY SWAP

Projects and users can conveniently distribute a direct link, for instance, via their Telegram channel, that leads to a dedicated page where their token can be swapped. This functionality is available even for tokens that are not officially listed on our swap platform.

HOW WE BUILT IT

In August 2021, JustMoney Swap was launched on Tron and soon evolved to support multi-chain and cross-chain operations through our in-house bridging solution. We've continuously improved the platform by integrating various functionalities such as widgets, a spot trading environment, and additional features like swap history tabs and discounted swaps. Our Widget Builder is specifically designed to streamline the creation of various widgets, catering to needs ranging from single-chain to cross-chain swaps.

CHALLENGES WE RAN INTO

One significant challenge was ensuring the seamless integration of non-listed tokens into our swap platform. We addressed this by enabling users to manually paste token addresses into the widget builder or distribute a direct link via platforms like Telegram, leading users directly to a page where their token can be swapped. Maintaining rigorous due diligence for projects wanting to be whitelisted remains a priority to ensure the integrity and security of our platform.

ACCOMPLISHMENTS WE ARE PROUD OF

We are proud to have launched three white-label solutions that incorporate our widget with a revenue share model. These solutions are already operational and delivering significant value to users. Additionally, our revenue-sharing model, where entities deploying our widget can earn 10% from all discounted swaps, stands out as a testament to our commitment to community and partner benefits.

WHAT WE LEARNED

Throughout the development and expansion of JustMoney Swap, we learned the importance of flexibility in product design to accommodate diverse user needs. This includes the ability to support various blockchain functionalities within a single tool and the necessity of an adaptable revenue model to support our growth and sustainability.

WHAT'S NEXT FOR JUSTMONEY SWAP?

JustMoney Swap is the foundation of our growing Ecosystem, which includes interconnected products like Spot, Bridge, Gift, Pay, and Explorer. Our roadmap includes further enhancements to our swap platform, such as implementing automatic scanning of contracts for safety and vulnerabilities and expanding our market pair offerings beyond USDT and TRX. As we continue to develop and integrate new features, JustMoney Swap will remain at the crossroads of all our products, continuously improving as we expand our ecosystem.
